install update 1.2, fallout 4.0, new office, destruction. the launcher contains a new far less intrusive mod installer. R. I. P. Rick Astley at the D.C. Hall of Fame Induction Ceremony Released: Feb, 25th 2019 | 3:10 am Rick Astley is going to be one of the two surprise inductees to the D.C. Hall of Fame. He recently announced on Twitter that he'll be playing at the Hall of Fame Induction Ceremony in a few weeks. What a coincidence! I've seen Astley only a few times, but I still enjoyed some of his music, especially "Never Gonna Give You Up." I don't know much about Astley other than that he's one of my two favorite singers who did a concert where I was at. After watching his induction clip, I'm not so sure about that. Regardless, I'm thrilled for him. Here's the clip: Don't forget to subscribe to the new YouTube Channel so you can get notifications when I post videos. That way you'll know when I upload a new one! Q: Quartz.NET - Update job to use the latest schedule I am using Quartz.NET (1.4.1.0) and I have an existing job (Job A). Job A has been working perfectly for over a year. I use the same code to schedule jobs. I've noticed that the Quartz.NET CronTriggerManager.GetNextRunDate(jobDetail) in the old version (1.2.1.0) returns a

date in the past (and so the job would be run at that date) while in the latest version (1.4.1.0) it returns a date in the future (and so the job would not be run). I did not modify the code in my new version, I updated from the 1.4.1.0 to the latest version by following the update path for the NuGet package. There are no error messages. Quartz.NET is configured correctly. The only difference I can see is the version number. Job A is scheduled with the following: TriggerKey triggerKey = TriggerKey.Create(triggerName, cronSchedule); cronTrigger = TriggerKey.GetTrigger(triggerKey); 82157476af
